

■ 3-MONTH FRONTEND DEVELOPER ROADMAP

HTML → CSS → JS → React · Week-by-Week · Build Every Week

by SYNTAX ERROR | syntaxerrorr.com | [@code.abhii07](https://twitter.com/code.abhii07)

3	12	4 hrs	1
Months	Weeks	Daily	Project/Week

■ DAILY PLAN (4 hours/day)

1.5 hr	1.5 hr	1 hr
■ Learning	■ Coding	■ Project Build

■■ SIDE SKILLS (Learn These in Parallel)

■■ Git & GitHub	Daily commits, push every project, build green graph
■ Tailwind CSS	Use for styling all React projects from Month 3 onwards
■ Deployment	Vercel / Netlify — every project must have a live URL

■ STRICT RULES — FOLLOW THIS

■	Don't jump between resources — pick one and finish it
■	Don't just watch tutorials — type every line of code yourself
■	Build every single week — one project minimum, no excuses
■	Push code on GitHub — every day, build that green contribution graph

■ MONTH 1 — HTML + CSS + JavaScript Basics

Month 1	HTML + CSS + JavaScript Basics
Week 1	■ Tags — div, p, h1–h6, span, img, a, ul, ol, li ■ Forms — input types, button, label, textarea, select ■ Semantic HTML — header, nav, main, section, article, footer ■ Attributes — class, id, href, src, alt, placeholder ■ ...and more
■ BUILD	■ Resume Page ■ Simple Blog Page ...etc.
Week 2	■ Selectors — class, id, element, pseudo-class (:hover, :nth-child) ■ Colors, fonts, text styling, box model (margin, padding, border) ■ Flexbox — justify-content, align-items, flex-wrap (VERY IMPORTANT) ■ ...and more
■ BUILD	■ Landing Page ■ Navbar + Footer ...etc.
Week 3	■ CSS Grid — grid-template-columns, grid-area, auto-fit, auto-fill ■ Responsive Design — media queries, mobile-first approach ■ CSS Variables, transitions, animations, pseudo-elements ■ ...and more
■ BUILD	■ Fully Responsive Website ...etc.
Week 4	■ Variables — let, const, var, data types, type coercion ■ Loops — for, while, forEach, map, filter ■ Functions — declaration, expression, arrow functions, scope ■ DOM Manipulation — querySelector, innerHTML, classList, createElement ■ Events — click, input, submit, keydown, event delegation ■ ...and more
■ BUILD	■ Calculator ■ Interactive Page ...etc.

■ MONTH 2 — Core JavaScript + Projects

Month 2	Core JavaScript + Projects
Week 1	■ Event handling — click, input, change, focus, blur, keydown ■ Form handling — validation, preventing default, reading input values ■ DOM deep dive — parent/child traversal, insertBefore, removeChild ■ Local Storage — setItem, getItem, JSON.stringify, JSON.parse ■ ...and more
Week 2	■ ES6 — arrow functions, template literals, default parameters ■ Destructuring — arrays and objects, nested destructuring ■ Spread / Rest operators, optional chaining (?.), nullish coalescing (??) ■ Modules — import / export, named vs default exports ■ ...and more
Week 3	■ Promises — .then(), .catch(), .finally(), Promise.all() ■ async / await — cleaner async code, try/catch error handling ■ fetch API — GET requests, handling JSON, POST requests with body ■ Error handling — network errors, HTTP status codes, user feedback ■ ...and more
Week 4	■ Combine all concepts — DOM + Events + Async in one project ■ Project planning — wireframe first, then code ■ API keys — how to use them safely, reading documentation ■ ...and more
■ BUILD	■ To-Do App ■ Weather App (live API) ■ Quiz App ...etc.
■ GOAL	You should be fully comfortable with JavaScript logic and async code

■ MONTH 3 — React + Deployment

Month 3	React + Deployment
Week 1	■ What is React — why use it, virtual DOM, single-page apps ■ Components — functional components, JSX syntax, rendering lists ■ Props — passing data between components, prop types ■ Conditional rendering — ternary, &&, if/else in JSX ■ ...and more
Week 2	■ useState — state variables, updating state, re-rendering ■ useEffect — side effects, dependency array, cleanup function ■ Forms in React — controlled inputs, onChange, onSubmit ■ Lifting state up — sharing state between sibling components ■ ...and more
Week 3	■ React Router — BrowserRouter, Routes, Route, Link, useNavigate ■ API Integration — fetch inside useEffect, loading + error states ■ Tailwind CSS with React — className, responsive prefixes, dark mode ■ Context API — useContext, createContext, global state basics ■ ...and more
Week 4	■ Project build week — combine all 3 weeks into full app ■ Deploy to Vercel — connect GitHub repo, auto-deploy on push ■ GitHub profile — pin projects, write good READMEs, add live links ■ Code cleanup — remove console.logs, meaningful variable names ■ ...and more
■ BUILD	■ Notes App (full CRUD) ■ Movie Search App ...etc.

■ END-OF-ROADMAP PROJECT CHECKLIST

Project	Must Include
■ Portfolio Website	Live, responsive, shows all your projects with links
■ Calculator	DOM + events, clean UI, deployed on GitHub Pages
■■ Weather App	Live API, async/await, error states, responsive
■ To-Do App	CRUD, localStorage, clean React state management
■ Notes App	Full CRUD, React + Tailwind, deployed on Vercel
■ Movie Search App	API + React Router + search + responsive UI

■ RESOURCES — Everything You Need to Become a Frontend Dev

■ DOCUMENTATION & REFERENCE

■ MDN Web Docs	developer.mozilla.org/en-US/	The #1 reference for HTML, CSS, JavaScript — bookmark this, use it every single day
■ W3Schools	w3schools.com	Beginner-friendly quick reference with live code examples for all web technologies
■ Syntax Error	syntaxerrrr.com	Our website — notes, one-shot videos, DSA + web dev placement resources

■■ YOUTUBE RESOURCES

■ HTML + CSS + JS + REACT	Web Dev Simplified by Kyle Cook youtube.com/@WebDevSimplified Best channel for HTML, CSS, JS and React — concepts explained simply with small focused videos. Perfect for all 3 months of this roadmap.
■ FULL FREE COURSES	freeCodeCamp by freeCodeCamp.org youtube.com/@freecodecamp Full-length FREE courses on every frontend technology. Best for structured, in-depth learning — use for Month 2 async JS and Month 3 React.
■■ HINDI TUTORIALS	Code With Harry by Code With Harry youtube.com/@CodeWithHarry Hindi-medium tutorials — complete HTML, CSS, JavaScript and React series. Great for Indian learners, very structured and beginner-friendly.
